

# Makers Mattress Care.

## CARE DURING THE LIFESPAN OF YOUR MATTRESS.

Your Makers Mattress has only one sleep surface so you don't need to flip the mattress at regular intervals throughout the year.

Body indentations are a normal occurrence and indicate that your mattress is adjusting to your body pressure points.

To gain the maximum lifespan of the mattress, we recommend you rotate your mattress every week for the first 3 months, and every 3 weeks thereafter.

## WARNING.

You should not attempt to rotate a mattress by yourself as this may cause back injury or damage to your mattress.

## MAINTENANCE AND CARE.

1. You should always carry your mattress on its side.
2. Once unpackaged, never attempt to fold your mattress under any circumstances.
3. Don't remove any labels from your mattress.
4. All plastic bags should be disposed of immediately, these pose a serious choking hazard to infants and children.
5. Check monthly that bed base legs are tight and secure.
6. Bed bugs are an ever present risk. Our Dreamticket Anti-Bed Bug Mattress Encasement is easy insurance against this risk.
7. Mattress protectors are highly recommended to improve the longevity of your mattress.
8. Smoking in bed should be avoided.
9. Treat spills immediately by soaking up as much of the liquid as possible. Dab rather than scrub, and use a damp cloth to blot the area. If you are unsure, seek professional assistance.

**FINALLY, ENJOY THE SLEEP EXPERIENCE OF YOUR MAKERS BEDSET.**
